

How to Customize Your Customers' Experience with Their Crestron System

Crestron is a fully engineered, field-proven, end-to-end solution for managing and distributing digital AV and control signals for customized automation. This connectivity solution provides seamless technology integration from complex control systems to GUI design software, collaborative technologies and more! With Crestron and our team at your side, you can have full control over the important technology in your business.

LTC IT Solutions builds the interface and integration for control systems, audio and video distribution, lighting control, collaborative technologies, building management systems and enterprise management systems, wireless presentation systems, motorized shades, security systems, speakers, dynamic control surfaces, and GUI design software. We serve as a full-service software and web-application development company. We offer both expertise and affordability by utilizing an experienced and talented offshore development team and U.S.-based project management team.

Crestron Custom Integration – Advanced Multimedia Solutions

Advanced Multimedia Solutions (AMS), a high-value technology solutions company for businesses, government, and homes, was looking for a partner to provide custom programming on their platform Crestron. AMS has been working with LTC IT Solutions for the past three years.

“I have to say, they have transformed the way we manage the custom integrations with Crestron,” says Bryan Werner, CTS, Director of Business Development of AMS.

LTC provides AMS with an advantage by integrating the needs and requests of AMS's customers into their projects flawlessly, working as an extension to their team. LTC helps AMS ultimately become the dynamic partner their clients need in a very competitive marketplace.

“Not only do they help us with the custom integrations, but they have also helped us identify opportunities within our own projects,” Werner notes. “I highly recommend working with Mark and LTC if you are looking to advance your offerings with Crestron—and improving your process and driving results on every project.”
